M8 Mini Anti-bacterial Circulator

Built into the Plasma purification technology is a new evolution, which researched over many years to effectively decompose germs. The 15 million plasma passes through the airflow. The positively and negatively charged ions can reduce PM2.5 suspended particles, eliminate bacteria, airborne pollutants, and allergens from the room, bring the purified air to every corner.

- 
Eliminate germs
- 
Purify the air
- 
Deodorization
- 
DC
Energy saving
- 
Powerful air circulation
- 
Carry with you
- 
1/2/4/8 timer

● Purified daily odor

Completely decomposing various daily odor, enjoy the comfort brought to you by M8.

● Comfort circulation when pair with air con

The air inside the fan is thoroughly disturbed, equipped with compact 8" fan blade and the can move air up to 8M. M8 not only make breathing more safer, but also can balance the temperature of the space when pair with air conditioner.

● The more you save, the better

The lowest power consumption is 2W, provide significant energy savings.

● Compact & Portable

Support mobile power supply, which is suitable for outdoor activities.

● Considerate timer

1/2/4/8H snooze timer, sleep comfortably through the night.

● Comprehensive airflow

M8 Anti-bacterial Circulator can move air up to 8M. When operating with oscillate 90 degrees and manually swing up 30 degrees, the wind distribution can reach 25 square meters.

Plasma Purification Technology

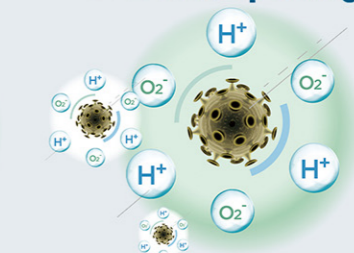

The Plasma purification technology is the process of releasing positive and negative ions by plasma discharge, resulting in the generation of highly oxidizing OH radicals. After extracting hydrogen from the surface of the mold, they instantly decomposing the proteins and destroying the bacteria. Finally, the extracted hydrogen is combined with OH radicals to form healthy water molecules (H₂O), which are purified and returned to the air.

1. Releasing

Automatically releasing Plasma

2. Decomposing

Decomposing harmful substances in the air

3. Purifying

Enjoy the purified air by the bacteria restraint and deodorization

Bacteria are invisible, highly effective purification

Safeguard every breath you take

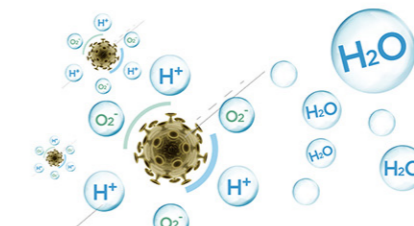

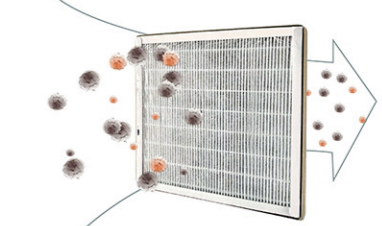

The bacteria concentration removal rate 91%

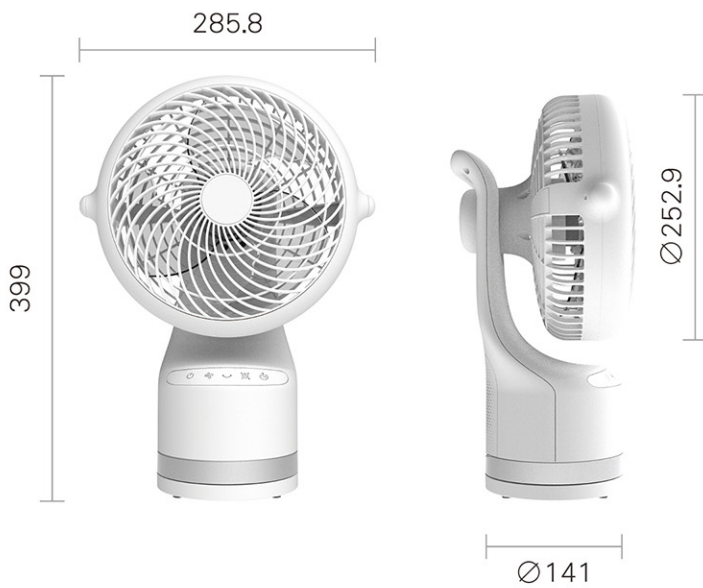

PM2.5 removal rate 82.5%

Eliminate germs effectively

The filter performance is getting worse and worse of general air purifier when the use of time is getting longer. Not only the wind resistance causes increasing noise, also the reduced efficiency just can filter the airborne particles, rather than remove germs. The Plasma technology is coupled with the powerful circulation to effectively decompose bacteria, allergens, mold, odor, and reduce PM2.5 suspended particles from the air in the room.

Plasma purification technology	Filter type
 <p>Continuously decompose bacteria and harmful substances</p>	 <p>Physical adsorption, short life span, easy to get acidic smell</p>

Dimensions (unit: mm)

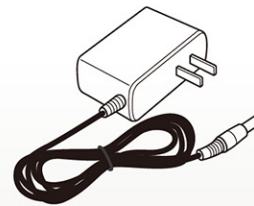

Specifications

Mini Anti-bacterial Circulator - M8

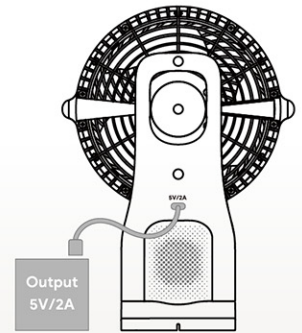

Blade size	8"			
Speed	4	3	2	1
Watt	10.5W	6.5W	3W	2W
Timer	1 / 2 / 4 / 8 Hrs			
Motor	DC motor			
DC power supply	input 100~240VAC 50/60Hz output 12V / 1.5A			
Adjust Angle	Automatic oscillating 90 degrees manually swing up 30 degrees			
Anti-bacterial	Plasma purification technology			
Weight	2kg			

Connect Power Bank

1. Only use a power bank that can output 5V/2A (Support type C power bank).
2. When using power bank, the wind speed 3 and 4, left to right oscillation functions will be canceled.
3. Do not use the power supply and the power bank at the same time.

Connect dc power supply

Connect power bank

Details

Mindful guard design to prevent hands reach in

Hidden handle to carry

Touch panel easy to control
